

Data Centre Power Protection

The Ministry of Communications of the Republic of Ghana instigated a visionary plan in 2008 to implement e-Government applications for revenue generating agencies and Registrar General's Department. This vision materialized in year 2010. Synergict won the bid to supply, install, commission and maintain parallel-redundant UPS power protection systems and automatic voltage stabilizers to provide voltage stabilization & backup power for ICT equipment and infrastructure.

Following a rigorous & progressive installation schedule commencing in June 2011, all power protection systems were successfully installed and commissioned in place before end of year.
